

As an Amateur Radio operator, I fully support the well founded Comment submitted by The American Radio Relay League concerning Docket ET 03-104. I find the comments made by the defendants of Broadband over Power Line (BPL) have little, if any, credible scientific data to support approval of ET 03-104 at this time. There is a great need for further research and innovations in BPL to guarantee this innovative technology will not cause irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range. If approved, ET 03-104 would violate the existing FCC rules on non-interference and would oppose the best interest of the public.
